DETAILED ACTION

Status of Application

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive in view of the decision by the Board of Patent Appeals and Interferences and, therefore, the finality of that action is withdrawn.

Claims 1-4 and 20 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 5-15 and 19, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104. Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 01/10/2008 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Examiner's Statement of Reasons for Allowance

Claims 1-15, 17, 19 and 20 are allowed. The following is an examiner's statement of reasons for allowance:

The pending claims are drawn to a precipitated silica material. Claim 1 is reproduced below with bold-faced portions added for purpose of discussion:

A precipitated **silica** which has the following properties:

BET surface area 200 - 300 m²/g,

CTAB surface area \geq 170 m²/g,

DBP number 200 - 300 g/(100 g), and

Sears number V₂ 23-35 ml/(5 g).

All language and all features in the claim have been considered, but several observations are made in view of the bold faced portions to facilitate comparison with the closest prior art: (1) the silica requires a high CTAB surface area value and (2) the unexpected properties which result from this high CTAB surface area value cited in Applicants' Declaration Under 37 CFR 1.132, submitted 07/28/2008

The best prior art uncovered by the search is that of the Applicants:

Uhrlandt et al. – (US Patent No. 6,180,076) teach a precipitated silica with the characteristics in Claim 1):

- BET surface area is 120-300 m²/g
- CTAB surface area is 100-300 m²/g
- DBP index number is 150-300g/100g

As acknowledged by Applicants, Uhrlandt discloses a precipitated silica having ranges of values for BET surface area, CTAB surface area, DBP number, and Sears number V₂ which overlap the claimed ranges. However, in evaluating Applicants'

Declaration evidence and weighing its value against the evidence of obviousness, the Declaration provides a comparison between an exemplified silica of Uhrlandt and an example representative of the claimed silica. According to the Declarant, the higher CTAB values of the inventive precipitated silica lead to reduced attrition while maintaining a rolling resistance of the tire comprising the silica. In the words of the Declarant, "[t]his effect was unexpected, because one of skill in the art would expect that upon an increase in the CTAB values, an increase in rolling resistance would be observed" (Dec. ¶15). Appellants properly state that "the properties of dynamic modulus and rigidity of tires prepared from the present precipitated silica are disclosed properties, as described in the specification at page 32, lines 8-11, which properties therefore can be relied upon in evaluating the difference between the precipitated silica as claimed and that of Uhrlandt et al." (Prin. Br. 7, first full para.). For these same reasons the now rejoined claims directed to a process for manufacturing the claimed precipitated silica and the claims directed to a material comprised of the claimed silica are found to be allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Claims 1-15, 17, 19 and 20 are allowed.
